Today started like any normal day testing prompts, breaking things, trying random ideas.

But then I built something...

that honestly surprised me.

I created a single prompt that can take **any photo** literally any and transform it into a **celebrity-style portrait**.

No editing. No skills.

Just paste the prompt... and upload your image.

At first, I thought it would just apply some filters or basic styling.

But when I tested it...

The output didn't look like an "edited image."

It looked like something straight out of a magazine shoot.
